

Forking, Reusing, and Contributing to the Learning Lab

This page describes how teams can work with the ASAP-CRN Learning Lab, link GitHub repositories to Verily Workbench workspaces, and contribute improvements back to shared Learning Lab resources.

Step 1: Get the Learning Lab Repository

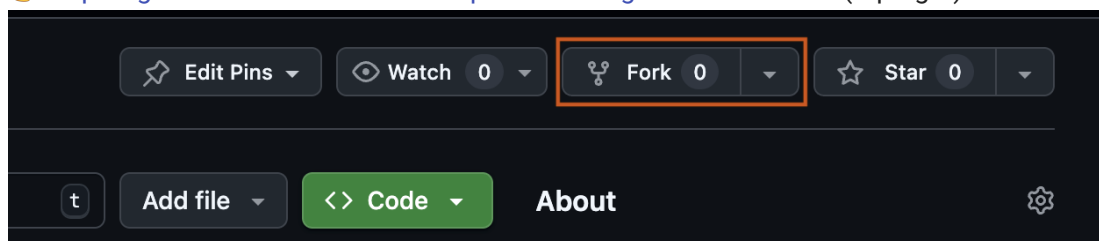

There are two recommended ways to use the Learning Lab, depending on how much customization you need.

Option A: Fork the Repository on Github (Recommended)

Forking creates your team's own copy of the repository so you can customize notebooks, documentation, and workflows while keeping the upstream Learning Lab intact.

1. Go to the Learning Lab repo on GitHub:

 <https://github.com/ASAP-CRN/asap-crn-learning-lab> 2. Click **Fork** (top right)

3. Choose your organization or personal account as Owner of the forked repo. 4. Click **Create fork**

Note

For more information on forking a github repository, see the official [GitHub documentation on Forking](#)

✓ Best for: Teams that plan to modify notebooks, add new content, or maintain internal variants of the Learning Lab.
